

News & Helpful Hints for the Informed Homeowner

Spring 2012

Spring has come early this year and the signs of summer are coming quickly. Of course, this may mean that your heating system is shutting down and your A/C is starting to run. Read on for information about the importance of maintaining your home comfort system so your family can stay cool this summer. Check out the special pricing below!

Play Ball! Summer also means the return of baseball - we're giving away free Barnstormer's tickets... details are below as well!

Thanks for giving us the opportunity to serve you - Have a wonderful summer!

Bioheat Advantages

What about Solar?

Prices on solar equipment continue to fall thanks to healthy competition between equipment manufacturers. A residential solar electric system is a great way to diversify your energy supply! Contact us for a free solar quote and analysis.

Change That Air Filter!

A dirty air filter in your heating or cooling system is like putting a plastic bag over your head and trying to breathe. Make sure you're checking your filter regularly and changing it if needed. A clogged filter impacts the efficiency of your system - using more energy to operate.

Start Your Engines

Join fellow race fans on April 28th at the Clyde Martin Memorial Speedway for fan appreciation day! Admission is free. Gates will open at 3:30pm with warm ups starting at 5pm and racing starting at 6pm.

Why Schedule an Air Conditioner Check-Up?

You know the saying, "You have to spend money to make money"? It can also be said "You have to spend money to save money." Air conditioning systems need yearly maintenance just like your heating system. Why? At your yearly tune-up, you greatly increase the chances that your A/C technician will catch small problems before they become big ones. Repairing a small refrigerant leak shouldn't cost much more than the service call. Buying a new compressor when low refrigerant levels burn your current one out, however, can cost a thousand dollars or more. Your A/C tech will also ensure that your A/C unit is working at optimal efficiency. When your A/C is running well it uses less energy to cool your house, and lower energy use means bigger savings for you on your monthly utility bills.

What are the advantages of Bioheat®?

Bioheat® is safe and provides a cleaner, more complete and energy efficient burn than traditional heating oil. It is a renewable energy source that reduces toxic emissions; it is biodegradable, and suitable for sensitive environments. It may actually extend equipment life and reduces periodic maintenance intervals. Bioheat® is made domestically from agricultural or recycled resources, reducing America's dependence on foreign oil and creating jobs here at home. At Weaver Energy we use 5% Bioheat® - if you have any questions about the fuel, give our office a call or visit [Bioheat Online](#).

Celebrate Spring with the Barnstormers!

Tickets are now available for the Barnstormers. Stop by our office to pick up tickets for the games from May to September! We have 4 seats on the 3rd baseline and tickets are free for customers. Stop by early - they go fast! Visit the [Barnstormer's website](#) to view their schedule for the 2012 season.
