

# tekmar® House Controls

## What Makes tekmar House Control Systems Different?

A good heating system will precisely match heat loss to maintain a steady indoor temperature. Most conventional controls only provide heat after the room is too cold, creating uncomfortable temperature swings. Fortunately, there is a solution.

Every tekmarNet® Thermostat interacts directly with the House Control, telling it exactly how much heat is required. The result? A more comfortable heating system that uses the lowest possible water temperatures, saving energy and reducing your impact on the environment.

## tekmarNet® House Controls

The heating system is an integral part of your home. Shouldn't your control be just as important? At tekmar, we couldn't agree more, which is why we've taken our advanced tekmarNet® building control technology, and simplified it for your home.

Compact controls, discreet thermostats and convenient accessories designed to seamlessly connect your heating system in the most efficient means possible. The move to tekmarNet® couldn't be easier.

Demand Comfort With

 tekmarNet®

# Comfort & Efficiency, Together at Last

## Reliable Hot Water

Packed with advanced DHW features, the House Control ensures Domestic Hot Water needs are met seamlessly and efficiently.

## Efficiency Meets Simplicity

With simple up and down temperature adjustment and a dual temperature display, comfort control couldn't get any easier. Plus, communication with the House Control provides uncompromised efficiency throughout your home.

## One-Touch Convenience

Turning down the temperature when leaving your home can save 10 to 15% in heating costs. Convenient accessories from tekmarNet® let these savings be realized. All tekmarNet® Thermostats in the house can be turned down at the push of one button on a User Switch 479. They can also follow a central schedule entered into a Timer 033.

## Keep Your Boiler Happy

Boilers should only work as hard as they have to. With Indoor Feedback from tekmarNet® Thermostats, the boiler is able to deliver the exact amount of heat required by each room. The result is lower fuel consumption and increased energy savings.

## The House Control Advantage

tekmarNet® House Controls coordinate every aspect of your heating and cooling system. Thermostats regulate the temperature in your living space and the House Control operates your boiler, domestic hot water, hot tub, and pool. When they are connected to one another, a network is created that allows all components to work together, providing exceptional home comfort with the highest efficiency possible.
